LIFELONG RESEARCH OBJECTIVE

My lifelong research objective is to uncover the fundamental principles behind how complex phenomena emerge and operate, and to develop ways to explain and validate them, contributing to deeper understanding and practical problem-solving.

RESEARCH INTERESTS

My research interests center on LLM interpretability and the development of capable small language models. I aim to understand how knowledge and reasoning capabilities are represented and processed within large language models by analyzing their internal representations and mechanisms. Building on these insights, I investigate how such capabilities can be effectively transferred to smaller models through knowledge distillation and related techniques. Ultimately, my goal is to bridge the understanding of model internals with practical methods for improving the reasoning ability, efficiency, and overall performance of small language models.

EDUCATION

- **Soongsil University** Mar. 2025 - Aug. 2027 (Expected)
B2M Program in Software (advisor: Chanjun Park)
Lab: <https://sites.google.com/view/ssu-nlp/home>
- **Soongsil University** Mar. 2021 - Feb. 2026 (Expected)
B.S. in Software (advisor: Chanjun Park)
